WEEK 2 | PROJECT MODULE 2

GOOGLE HACKING-DATABASE

For educational purposes only!

FOOTPRINTING & RECONNAISSANCE ATTACKS WITH GHDB

CYBERSECURITY & ETHICAL HACKING PROJECT TASKS

WEEK 2 | PROJECT MODULE 2

FOOTPRINTING & RECONNAISSANCE ATTACKS WITH GHDB

Background

GHDB (Google Hacking Database) is a large collection of ready-made search queries called Google dorks. These dorks use normal Google search operators in clever ways to pull out sensitive information that a website has accidentally left public, such as exposed camera feeds, open directories, login pages, config files and documents. GHDB was built for pentesters and security researchers so they can find and fix these leaks, and it is hosted on www.exploit-db.com.

What we will do in this task?

In this module you will use GHDB dorks to footprint real targets through Google alone, without ever touching the target directly. You will search for live exposed devices and public files, open and verify each result, and record what you find along with the exact dork you used. Save every finding carefully, as you will need it for your final report.

TASKS

Task 1. Find 10x live vulnerable security camera links that are exposed & accessible from Internet. List them in below table along with their relevant dork that you have used.

No.	Link	Relevant Dork	Username /Password (if any)

Task 2. Find 10x listings which contain downloadable mathematics ebooks in PDF format:

No.	Link	Relevant Dork	Username /Password (if any)

TASK 1

SOLUTION

STEP 1

Open www.exploit-db.com

STEP 2

Click on GHDB from the left-side menu:

STEP 3

Search for the term "cam":

The screenshot shows the Google Hacking Database (GHD) interface. The search bar contains the term "cam". The results are displayed in a table with columns: Date Added, Dork, Category, and Author. The table lists various dorks related to camera monitoring and login portals.

Date Added	Dork	Category	Author
2021-11-16	intext:"Real-time IP Camera Monitoring System" intext:"ActiveX Mode (For IE Browser)"	Various Online Devices	Yash Singh
2021-11-16	intitle:"Login" intext:"cam"	Pages Containing Login Portals	Yash Singh
2021-11-12	intitle:"Login" intext:"camera"	Pages Containing Login Portals	Naveen Venugopal
2021-11-09	intitle:"webcamXP" inurl:8080	Various Online Devices	Krishna Agarwal
2021-11-09	intitle:"Index of" "DCIM/camera"	Files Containing Juicy Info	Krishna Agarwal
2021-10-28	intitle:ip camera login page	Pages Containing Login Portals	jawhar milkan
2021-10-26	intitle:"Microseven M7CAM IP Camera"	Various Online Devices	Neha Singh
2021-10-19	intitle:"webcamXP 5" inurl:admin.html	Various Online Devices	César Hernández Obispo
2021-10-01	intitle:"Index of ipcsm"	Files Containing Juicy Info	Romell Marin Cordoba

STEP 4

Copy the dorks one by one:

The screenshot shows the Google Hacking Database (GHD) interface with the search results for "cam". A context menu is open over the dork "intitle:'webcamXP' inurl:8080", showing options like "Copy", "Copy link to highlight", and "Search Google for 'intitle:'webcamXP' inurl:8080'".

Date Added	Dork	Category	Author
2021-11-16	intext:"Real-time IP Camera Monitoring System" intext:"ActiveX Mode (For IE Browser)"	Various Online Devices	Yash Singh
2021-11-16	intitle:"Login" intext:"cam"	Pages Containing Login Portals	Yash Singh
2021-11-12	intitle:"Login" intext:"camera"	Pages Containing Login Portals	Naveen Venugopal
2021-11-09	intitle:"webcamXP" inurl:8080	Various Online Devices	Krishna Agarwal
2021-11-09	intitle:"Index of" "DCIM/camera"	Files Containing Juicy Info	Krishna Agarwal
2021-10-28	intitle:ip camera login page	Pages Containing Login Portals	jawhar milkan
2021-10-26	intitle:"Microseven M7CAM IP Camera"	Various Online Devices	Neha Singh
2021-10-19	intitle:"webcamXP 5" inurl:admin.html	Various Online Devices	César Hernández Obispo

STEP 5

Open google.com & search the dork in it:

STEP 6

Open the links one by one & list down after checking one by one:

STEP 7

Repeat the above steps for next dorks until you find 10x live exposed cameras. List them down in below table format (one example is shown below):

No.	Link	Relevant Dork	Username /Password (if any)
1	http://122.116.41.8:8080/	intitle:"webcamXP" inurl:8080	---

TASK 2

STEP 1

Open google.com & search the dork in it:

STEP 2

Open the listings one by one & check which ones have required Mathematics PDF ebooks:

TASK 2

STEP 3

Repeat the above steps for next dorks until you find 10x listings which contain downloadable mathematics ebooks in PDF format (one example is shown below):

No.	Link	Relevant Dork	Username /Password (if any)
1	https://www.skylineuniversity.ac.ae/pdf/math/	intitle:index.of "parent directory" mathematics pdf	---
2			
3			

⚠ Extra References & tips

There are various other webcam related dorks which you can practice to improve your knowledge & skills. For example:

```
allintitle: "Network Camera NetworkCamera"  
intitle:"EvoCam" inurl:"webcam.html"  
intitle:"Live View / - AXIS"  
intitle:"LiveView / - AXIS" | inurl:view/view.shtml  
inurl:indexFrame.shtml "Axis Video Server"  
inurl:axis-cgi/jpg  
inurl:"MultiCameraFrame?Mode=Motion"  
inurl:/view.shtml  
inurl:/view/index.shtml  
"my webcamXP server!"
```

Exploit-db also lists down many current exploits which you can study & practice to improve your knowledge.

WHY GHDB MATTERS IN FOOTPRINTING?

Reconnaissance is the first stage of every real attack. Before touching a target, an attacker quietly builds a full picture of it using only public information, and Google is one of the richest sources of that information. Google constantly crawls and indexes almost everything a website exposes, so an attacker often does not need any special tool, just the right search. This is where GHDB becomes powerful. Its dorks turn ordinary Google into a precise recon tool that surfaces exposed cameras, open folders, backup files, login portals and leaked documents that owners never meant to publish. Because all of this comes straight from Google, the target is never contacted and never knows it is being studied, which makes GHDB one of the quietest and hardest to detect forms of footprinting.

The same dorks that an attacker uses to find weaknesses are also used by defenders to search their own domains, so they can discover what they are leaking and lock it down before someone else finds it. The lesson is simple: the less an organization exposes to Google, the smaller its attack surface becomes.

Liability Disclaimer

These materials are for education and research purpose only. Although this course includes practicals and labs, but they are meant for learning purposes only. The aim is to show you how attacks work in real world systems so you can defend systems better. Do not use anything from here to break the law. The instructor, the authors and Networkwalks Academy are not responsible for what you do with this knowledge. Every action you take is your own responsibility. Misuse can lead to criminal charges, heavy fines, loss of your job and a permanent record. In most countries unauthorised access is a crime even when nothing is damaged.

Hacking is only legal when:

- You test a device or network that you own or your Lab environment
- You have written and documented permission from the owner
- You are working as a security professional under a signed agreement with an agreed scope

Everything outside these cases is illegal!

Virtual lab

Your own devices

By continuing you confirm that you have read this disclaimer and accept full responsibility for your actions!
